

Can You Communicate on the Run?

THE REAL QUESTION

You should ask yourself: "Can I communicate the critical business information to my co-workers or emergency information to our citizens in a situation that does not allow for time to be wasted?"

- a) What's so critical?
- b) Sure. I'll use the phone.
- c) Maybe... er... depends...

IF YOU HAVE ANSWERED:

- a) If distribution of any information critical for your corporation or your country depends on you, please call us. We can help.
- b) Please, try again. This time, take reality into account.
- c) So, you are aware...

If you have answered c), then you are among the majority of the responsible individuals aware of the seriousness of the issue at hand.

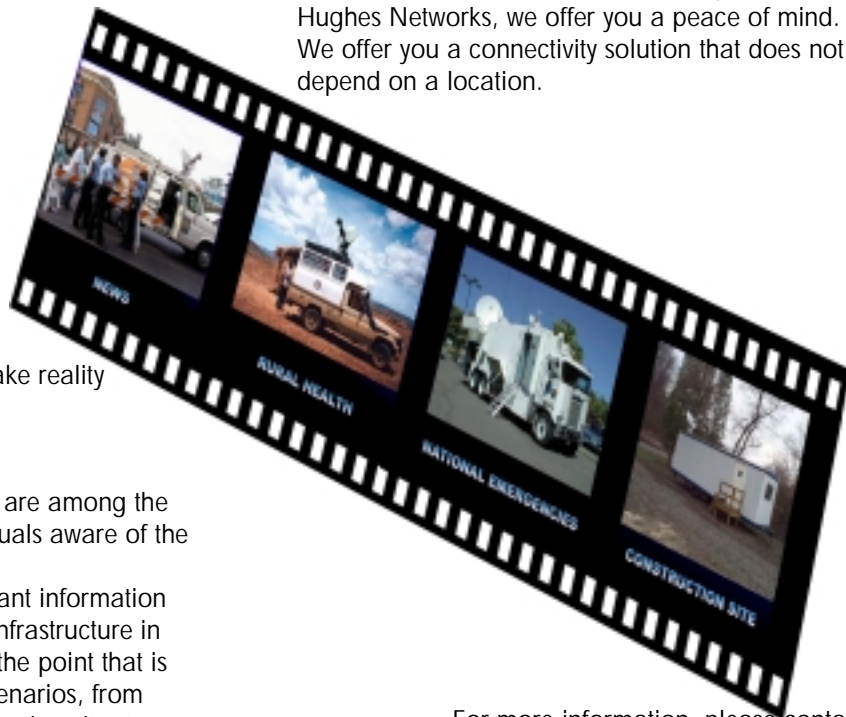

How do you communicate important information when either you do not have the infrastructure in place or it has been damaged to the point that is useless. Just think of numerous scenarios, from remote news reporting and construction sites to medical, military and security emergencies. It really is a tough question to answer. Fortunately we can help.

THE REAL ANSWER

Two-way satellite connection.

So simple, yet so efficient. After years of perfecting the technology, finally the production grade solution is available for satellite-based network connectivity.

In partnership with C-COM Satellite Systems and Hughes Networks, we offer you a peace of mind. We offer you a connectivity solution that does not depend on a location.
